The image shows two printed circuit boards (PCBs) for a 16-bit parallel adder. The boards are green and populated with various electronic components. Key components visible include integrated circuits (ICs) labeled 74181 and 74182, resistors, capacitors, and a 16-pin D-sub connector. The boards are connected to a central vertical strip, likely a bus or power supply line. The components are arranged in a symmetrical fashion on both boards, indicating a balanced design for the adder circuit.
